

In the claims:

1. (Currently Amended) A semiconductor device comprising:  
a supporting substrate made of insulating material;  
a conductive pattern provided on a surface of the supporting substrate;  
an external connecting terminal provided on a back surface of the supporting substrate  
and electrically connected to the conductive pattern;  
a circuit element provided on the conductive pattern;  
a glass plate that covers the circuit element and that forms a hollow airtight portion  
between the supporting substrate and the glass plate; and  
an light-shielding adhesive resin applied over an entire surface of the glass plate.

2. (Cancel)

3. (Original) A semiconductor device according to claim 1, wherein the circuit element  
includes a semiconductor element or a fuse element.

4-7. (Withdrawn)

8. (Previously Added) A semiconductor device comprising:  
a substrate;  
a circuit member provided on the substrate;  
a terminal provided on a back of the substrate and electrically connected to the circuit  
member through the substrate;  
a wall surrounding the circuit member; and  
a transparent plate with a light-shielding adhesive resin provided over the transparent  
plate's entire surface, said transparent plate adhered on the wall and over the circuit member to  
form an airtight cavity between the substrate and the transparent plate.

9. (Previously Added) The semiconductor device according to claim 8 wherein the circuit  
member comprises:

a conductive pattern disposed over the substrate; and  
a semiconductor chip disposed over the conductive pattern.

10. (Previously Added) The semiconductor device according to claim 8 wherein the substrate comprises insulating material.

11. (Previously Added) The semiconductor device according to claim 8, wherein the circuit member includes a fuse element.
